

Practical – 1		Date:-19/07/2024
Aim:-	Creating and Managing Vector Data	

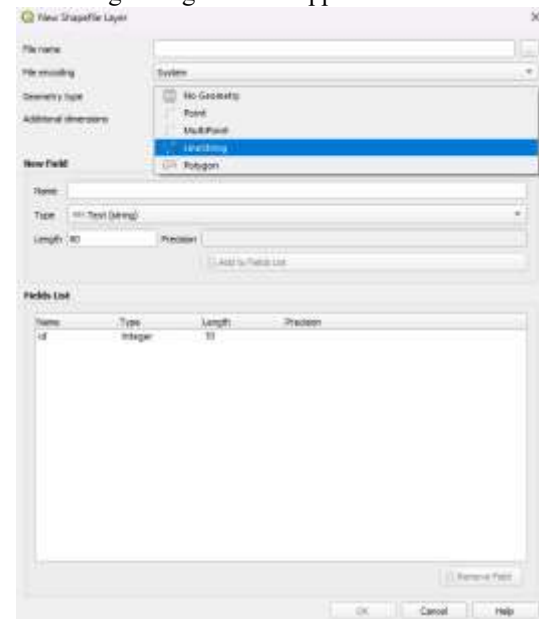

Steps:-

Select Project → New

Select Layer → Create Layer → New Shapefile Layer

Following dialog box will appear on the screen. Select Polygon option from Geometry type.

Fill the appropriate information in each text box.
Click on Add to Field List Button.

Click Ok.

Follow the steps to plot Polygon Features.

Select the polygon Feature from layer panel.

Click Toggle Editing Button → Click on Add Polygon → Now place the cursor at the location where you want to place the polygon. for polygon layer minimum 3 points should be selected

Save the newly added polygon as follows

Set style for polygon by using property window

Same way we can add one more polygon layer for ground.

Creating Line vector layer

Repeat the same steps as we have done for polygon layer.

Select geometry type Line. **Road layer:**

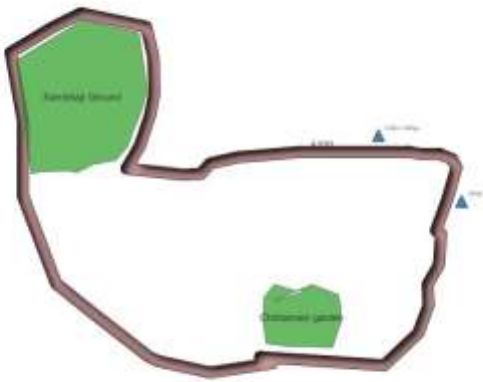

To plot road, click on Add Line Feature

Click on the map where you want to draw line.

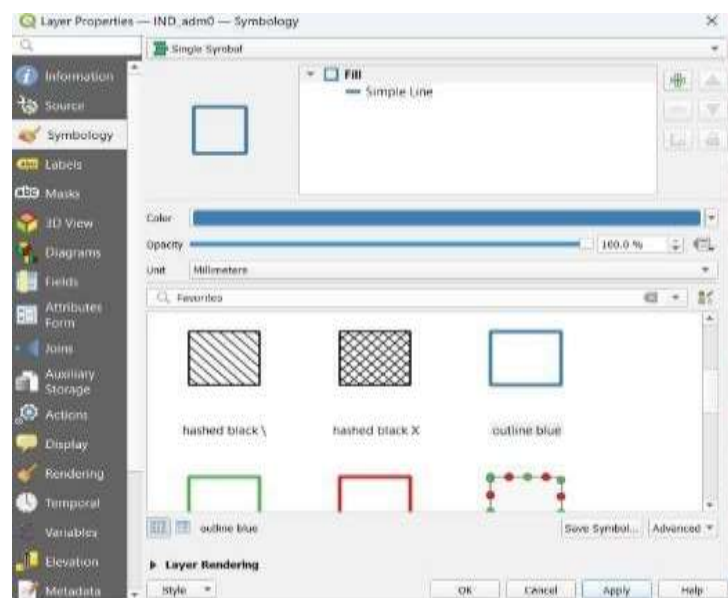

set style for Roads in the same way as we have done for polygon

Check Enable symbol levels option as soon as show the road appear as follows.

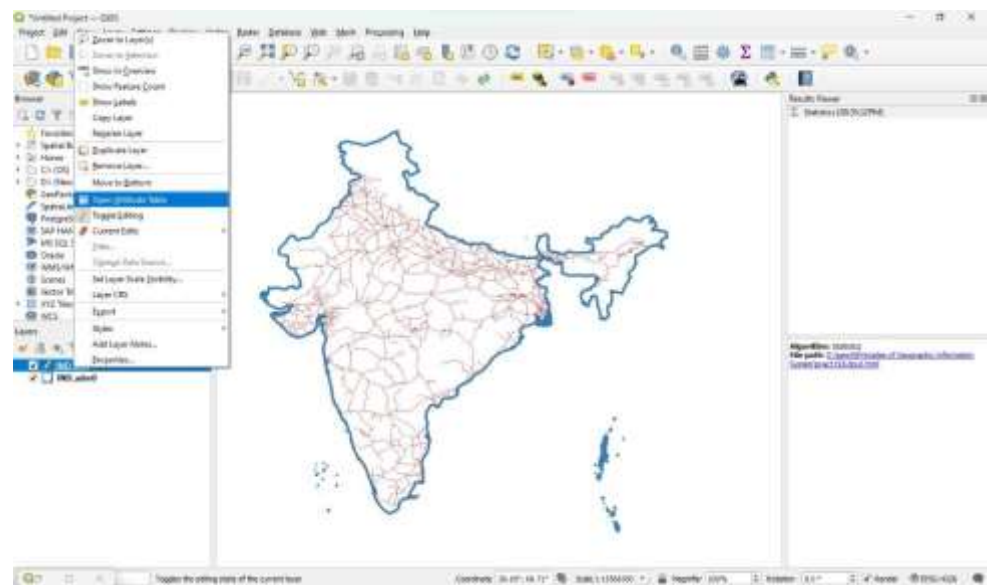

Final Output:-	
----------------	--

Practical(1b):-	Calculating Line, Lengths and Statistics.	Date:-
Steps:-	<p>Go to Layer → Add Layer → Add Vector Layer</p>  <p>Add the following file to project</p> <p>“GIS_Workshop\Practicals\Practical_01\D\DATA\IND_rrd\IND_rails.shp” Press “ADD”</p> <p>Also add India Administrative Map</p> <p>“GIS_Workshop\Practicals\Practical_01\D\DATA\IND_adm\IND_adm0.shp”</p> <p>Double Click on IND_adm0</p>	

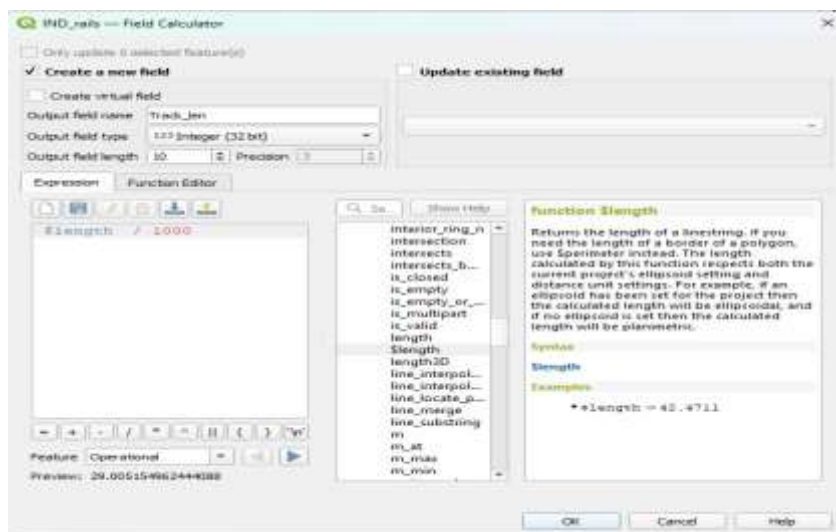

In Layer Pane, Right click on IND_rails → Open Attribute Table.

Press Toggle Editing button using button, on Attribute table window toolbar.

Press Open Field Calculator using button
Set the output field as “Track_Len”, field type to “Decimal Number”.

From Function List search \$length or go to Geometry → Select \$length Set

expression as follows

Press “OK”

Press CTRL+S or click on Save Edits option on tool bar

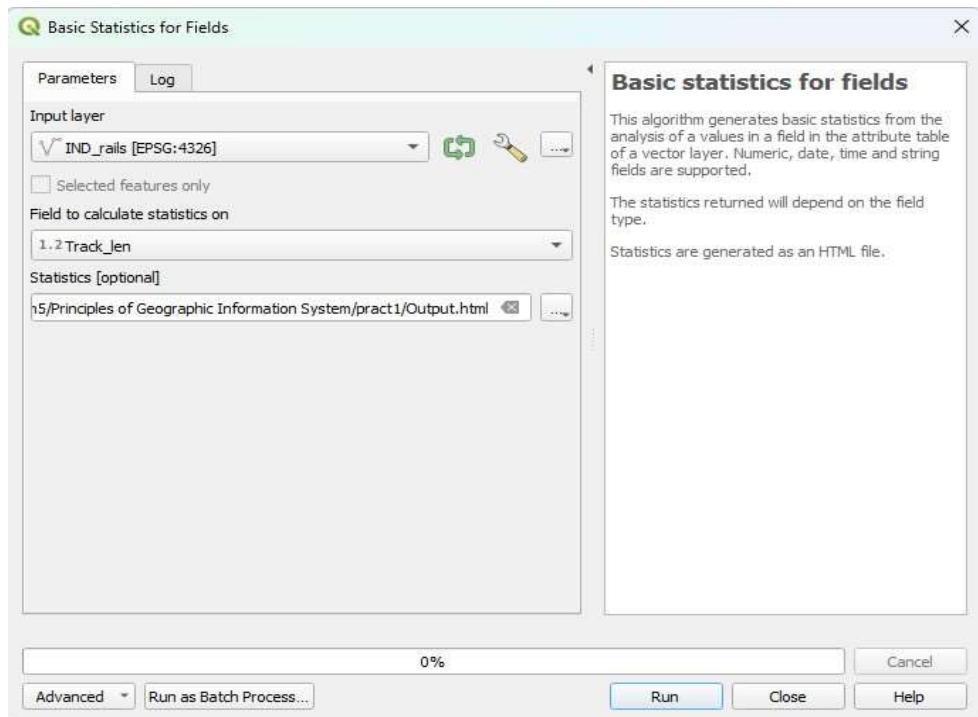

Close the attribute table window.

For calculating the total length of Railway tracks in India.

Select Vector→ Analysis Tools→ Basic Statics for Fields

Select IND_rails layer from input layer. And select Track_Len in “Field to Calculate

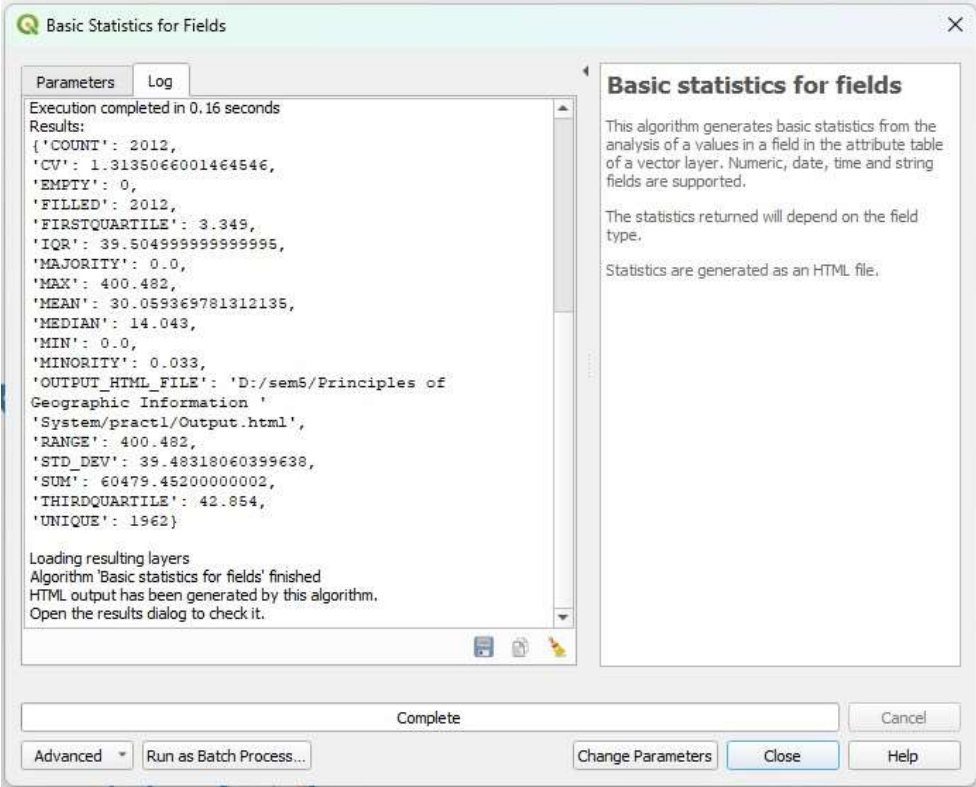

statistics on”

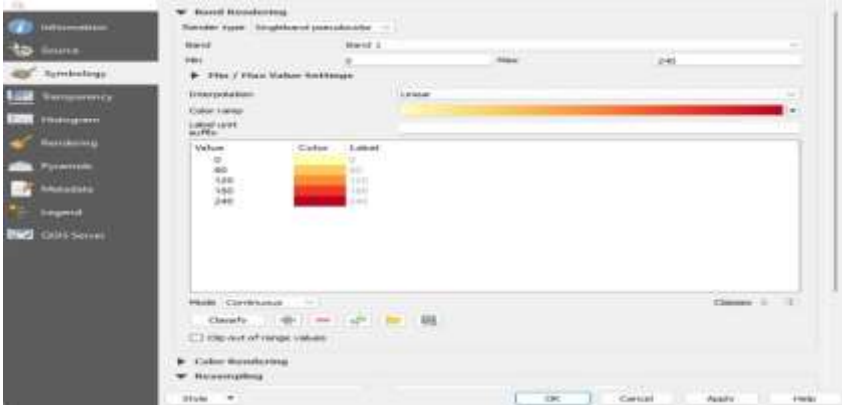

Press RUN

Open the “output.html” file to get the field statistics. Results:

Practical 2	Date:-01/08/2024
Aim:	Exploring and Managing Raster data: Adding raster layers, raster styling and analysis, raster mosaicking and clipping.
a)	Adding raster layer, raster styling and analysis.
Procedure :	<ol style="list-style-type: none"> Click layer -> Add Layer -> Add Raster Layer.  Browse to the location of the raster (glds90ag60 and glds00ag60) from dataset.  Add both raster. Then change the properties of the raster. Properties -> symbology -> render type = Singlebandpseudocolor, min = 0, max = 240. Press apply and ok. Repeat same for other raster.  Go to raster menu and open raster calculator and add the following expression and browse the location where you want to save the result file and click ok.

5. The result is added as a raster.
6. Now change the properties of the new raster
Properties -> symbology -> render type = Singlebandpseudocolor, min = -20000, max = 6000, interpolation = discrete, change label of values as shown below, then click apply and ok.

7. Output:

b)	Raster mosaicking and clipping.
-----------	---------------------------------

Procedure :	<ol style="list-style-type: none"> 1. Go to layer -> add layer -> add raster layer. Add the following .tif images from the data set. FAS_India1.2018349.terra.367.2km.tif, FAS_India2.2018349.terra.367.2km.tif, FAS_India3.2018350.terra.367.2km.tif, FAS_India4.2018350.terra.367.2km.tif. 2. Click open then add the raster
-----------------------	--

KET'S V. G. Vaze College (Autonomous), Mulund

Roll No :-A064

Name :- Nikesh Punaji Sabale

3. Go to raster -> miscellaneous -> merge.

4. In the merge window, click on 3 dots beside input layer and select all 4 layers and click OK.

5. In the merge dialog window select a file name and location to save the file and click RUN.

KET'S V. G. Vaze College (Autonomous), Mulund

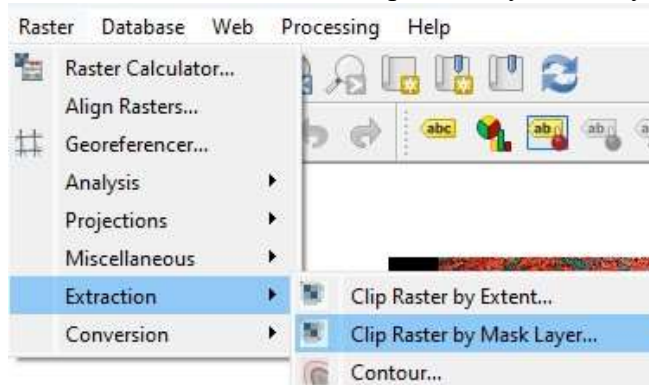

Roll No :-A064

Name :- Nikesh Punaji Sabale

	6. Go to layer -> add layer -> add vector layer, and add the vector layer of India.
--	---

7. Go to properties of the vector and select any of the outlines and click OK.
8. Go to raster -> extraction -> clip raster by mask layer.

9. In clip raster by mask layer :
Select the merged layer as input layer and save the file in your location and click RUN.

10. A new clipped raster gets added as the result. Output :

KET'S V. G. Vaze College (Autonomous), Mulund

Practical 3		Date:-22/07/2024
Aim:	Making a map, Working with attributes, Importing spreadsheets or CSV files, Using plugins, Searching and downloading OpenStreetMap data.	
a)	Making a map, working with attributes.	
Procedure :	<ol style="list-style-type: none">1. Consider the following map as an example map. 2. Go to Project → New Print Layout. 3. Insert a suitable title and press “OK”.	

KET'S V. G. Vaze College (Autonomous), Mulund

Roll No :-A064

Name :- Nikesh Punaji Sabale

4. A new Print Layout window will open.

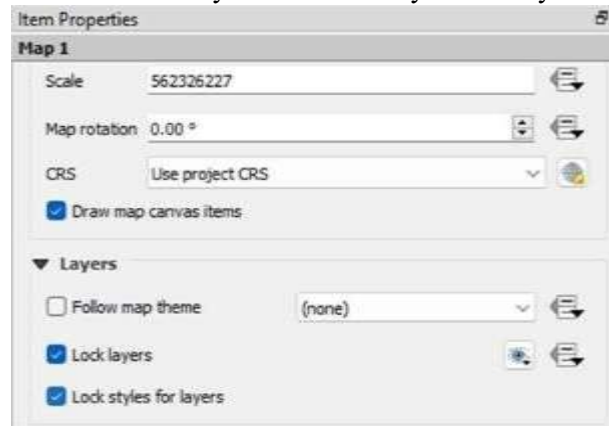

5. Select Add Item → Add Map.

6. After adding map go to Item Properties → Map1 → Layers.

7. Check on Lock Layers and Lock Styles for Layers.

8. This will ensure that if any change in layers or change their styles, the Print Layout view will not change.

9. Go to Add Item → Add Picture → Place a picture box at appropriate location.

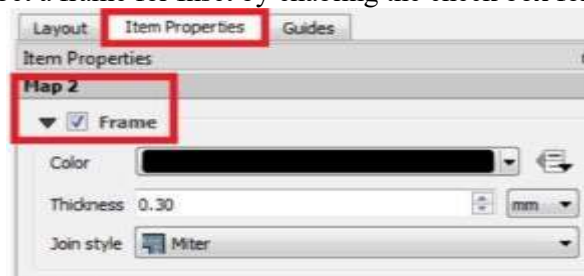

10. Also adjust Image Rotation to its appropriate value.

11. Item Properties → Image Rotation.

12. Add an inset Using Add Item → Add Picture → Select an area to be highlighted on main Map.

13. Set a frame for Inset by enabling the check box for Frame.

KET'S V. G. Vaze College (Autonomous), Mulund

Roll No :-A064

Name :- Nikesh Punaji Sabale

14. To highlight the area shown in Inset.
15. Select the Picture representing main Map from Items pane.
16. In Item Properties → Overviews → using  icon add an overview.
17. Select the checkbox Draw Overview.
18. Name the Picture object representing inset (Map1 in our case).

19. Add Item → Add Label.
20. Change the Label text To “Mumbai Map”, Set appropriate font size and color using

Item
Properties→
Main Properties

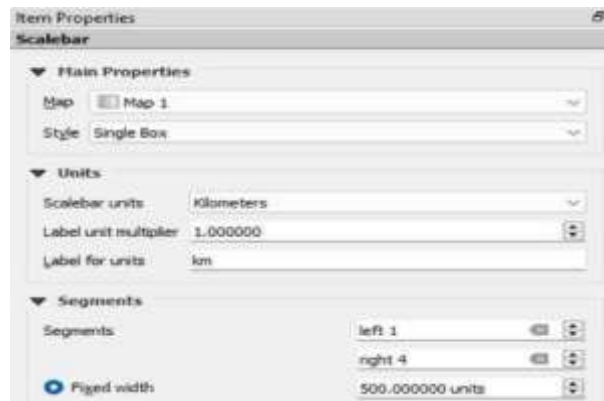

21. Add Item → Add Legend→ Place the legend indicator at appropriate location.

KET'S V. G. Vaze College (Autonomous), Mulund

Roll No :-A064

Name :- Nikesh Punaji Sabale

22. Uncheck auto update and use suitable legend indicator label 23. Add Item → Add Scale Bar.

24. Add Item → Add Label → Add a Label using HTML rendering.

b)	Terrain data

KET'S V. G. Vaze College (Autonomous), Mulund

Roll No :-A064

Name :- Nikesh Punaji Sabale

Procedure:

1. Go to Layer -> Add Layer -> Add Raster Layer. 2.

Select

G:\SEM5\GIS\Practical_04\B\10n060e_20101117_gmted_mea300.tif.

3. Click Add.

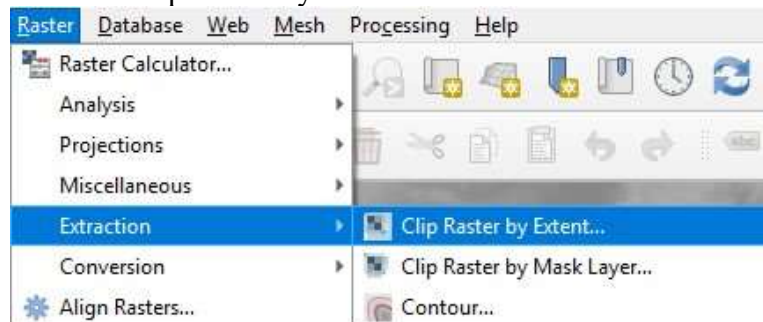

4. The lower altitude regions are shown using the dark color and higher altitude region using light shade as seen on top region containing Himalaya and Mt. Everest.

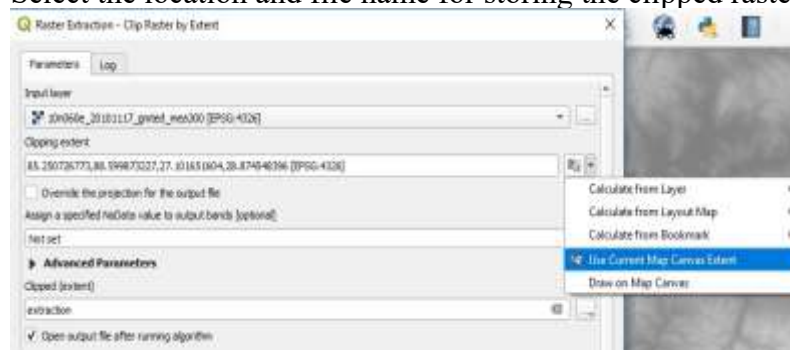

5. Mt. Everest is located at the coordinates 27.9881, 86.9253 and set scale to 1:1000000 and press Enter.

6. To crop the raster layer only for the region under study, Go to Raster -> Extraction -> Clip Raster by Extent.

7. Select the Raster layer as Input Layer, then Select the Clipping area by selecting the option Use Canvas Extent to select the visible part of the map.
8. Select the location and file name for storing the clipped raster layer.

9. Click on Run.
10. Deselect the original layer and keep the clipped one.
11. The Clipped raster layer is representing altitude from 103 Meters.

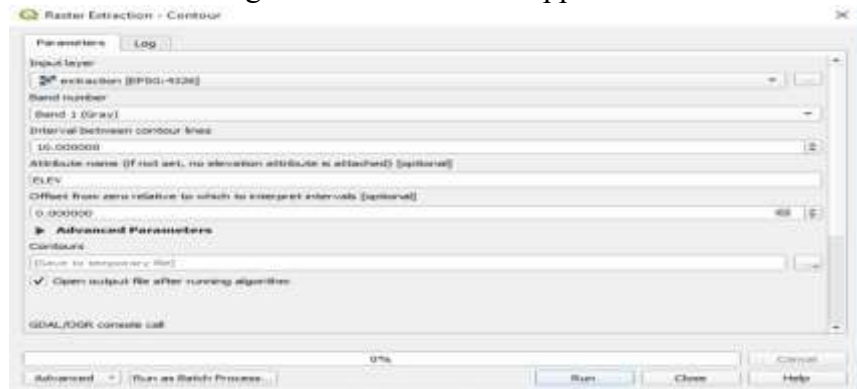

Original Raster

Clipped Raster

12. Counter lines are the lines on a map joining points of equal height above or below sea level. A contour interval in surveying is the vertical distance or the difference in the elevation between the two contour lines in a topographical map.
13. To derive counter lines from given raster.
14. Go to Raster → Extraction → Contour.

15. The Contour configuration window will appear.

16. Select the input raster layer name. Set contour interval 10.00 meters, select the output file name & location and check the option to add output file to project after processing.

17. Press "RUN".

18. The contour layer will appear like this.

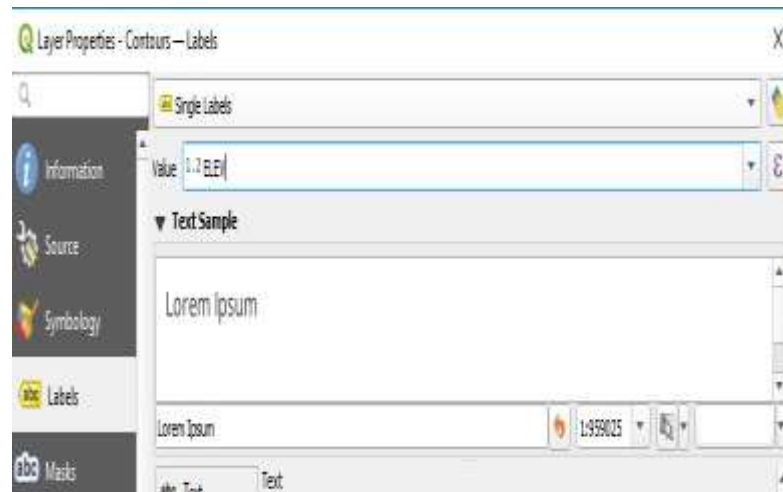

KET'S V. G. Vaze College (Autonomous), Mulund

Roll No :-A064

Name :- Nikesh Punaji Sabale

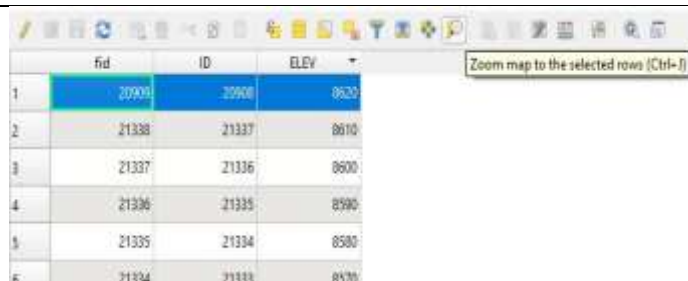

19. Label the layer using “ELEV” field and set appropriate symbols for

line.

20. In the Layer panel right click on Contour Raster Layer and select “Open Attribute table”.

21. Arrange the table in descending order based on the value of “ELEV” column.

	fid	ID	ELEV
1	20900	20900	8620
2	21338	21337	8610
3	21337	21336	8600
4	21336	21335	8590
5	21335	21334	8580
6	21334	21333	8570

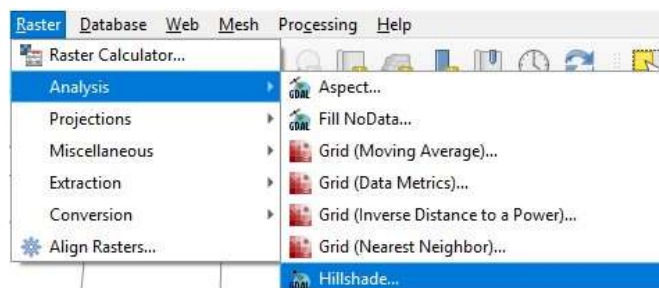

22. The layer appears like this:

23. For Hill Shade surface analysis.

24. Go to Plugin → Install Georeferencer GADL.

25. After successful installation of plugin Go to Raster → Analysis → Hill Shade.

26. Select the input raster layer, select file name and location for storing Hill Shade output file.

27. Press “RUN” and Close the Hill Shape Dialog window.

28. After Raster styling the Output will appear like this:

c)	Points in Polygon Analysis.
-----------	-----------------------------

Procedure:

1. Go to Layer -> Add Layer -> Add Delimited Text Layer.
2. Select “EarthQuakeDatabase.txt.
3. Go to Layer → Add Layer → Add Delimited Text Layer.
4. Select
“E:\GISPRacticals\Practicals\Practical_07\C\Data\ne_10m_admin_0_co
untries.zip”.

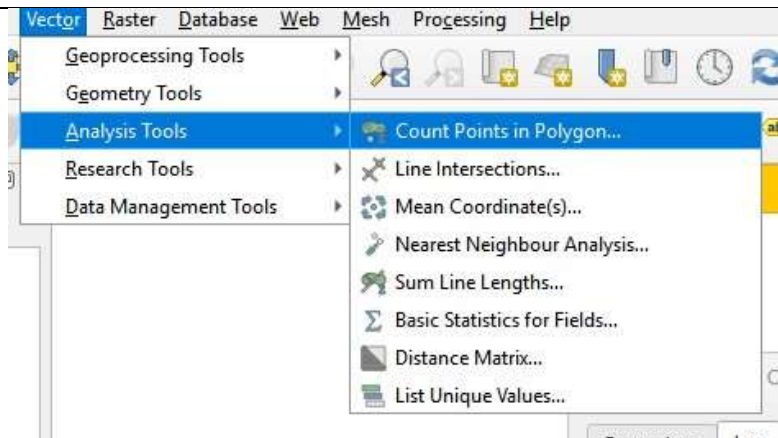

5. Now go to:

KET'S V. G. Vaze College (Autonomous), Mulund

Roll No :-A064

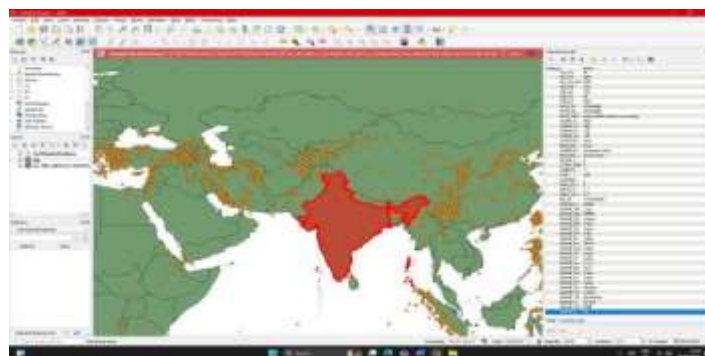

Name :- Nikesh Punaji Sabale

6. And Do this:

7. Use the select Feature

button to check country wise counting of

Earthquakes.

KET'S V. G. Vaze College (Autonomous), Mulund

Roll No :-A064

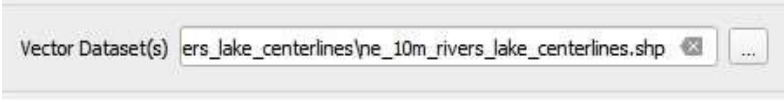

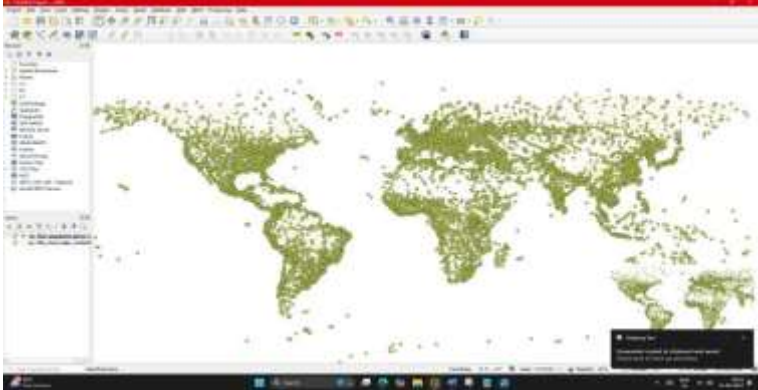

Name :- Nikesh Punaji Sabale

	8. Also a new column is added to attribute table “NumPoints” indicating number of earth quake points in each country.

Run

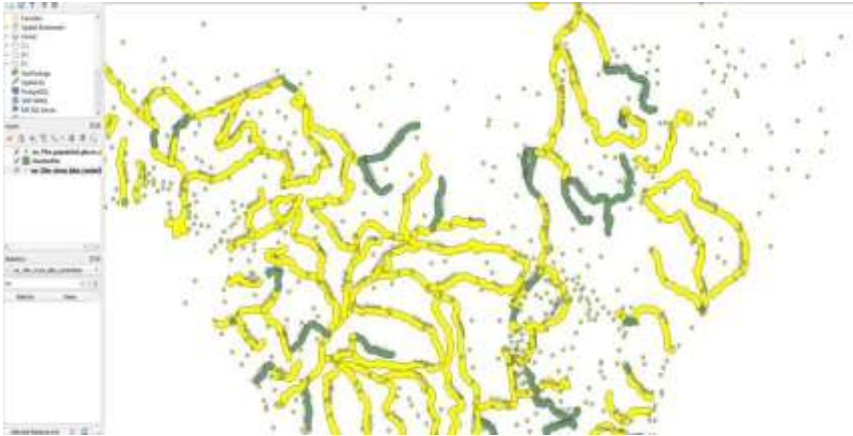

Close

Help

Select by location

The algorithm creates a selection in a vector layer. The criteria for selecting features is based on the spatial relationship between each feature and the features in an additional layer.

10. This will highlight only those rivers containing a populated place within 2 KM.

The screenshot displays an Excel spreadsheet titled "Employee Data" within a workbook named "Employee Data.xlsx". The spreadsheet contains a list of employees with the following columns: Employee ID, Name, Department, Job, Salary, Commission, Manager, and Hire Date. The data is organized into rows, with some cells containing formulas like =SUM(B2:B10) and =AVERAGE(B2:B10). The spreadsheet is titled "Employee Data" and is part of a workbook named "Employee Data.xlsx".

The screenshot shows the Microsoft Excel interface. The 'Lookup Assistant' dialog box is open, displaying a list of schools and years. The dialog box has a 'Find' button and a 'Cancel' button. The data table in the background has columns for 'School', 'Year', 'Subject', 'Score', and 'Status'.

[illegible]

3. Logical Data Checks: A. Cross Tabulations

- i. Open the existing worksheet. Now go to Insert Tab and select Pivot table function.

- To examine this, we need to save these layers as a Shapefile, to do that:
4. Select both the layers **Kenya_school_location** and **Kenya admin**, then right click on them **Export > Save Features As...**

5. In the menu that comes up, set **Format** as **ESRI Shapefile** and in **File Name** select **Kenya_schools.shp**
After this is done you can uncheck the **Kenya_school_location** in the **layers** section.
